- 9.2 Immaterial items not disclosed

Annex 1. Main features of capital instruments

Introduction

This report discloses information on the capital adequacy of the consolidated group of the amalgamation of member cooperative banks, as specified in Part 8 of the Capital Requirements Regulation of the European Parliament and of the Council No. 575/2013 (CRR) (Pillar III disclosures) in compliance with the guidelines issued by the European Banking Authority (EBA/GL)/2016/11). Given that this information is based on the consolidated capital adequacy on the amalgamation of member cooperative banks, it is not directly comparable with information disclosed on OP Financial Group. The Report is unaudited.

The amalgamation of cooperative banks consists of the amalgamation's central cooperative (OP Cooperative), the central cooperative's member credit institutions and the companies belonging to their consolidation groups. Although OP Financial Group's insurance companies do not belong to the amalgamation of the cooperative banks, investments made in them have a major impact on capital adequacy calculated in accordance with the capital adequacy regulations for credit institutions. More detailed information on companies within the consolidation group can be found in point 5.3 (LI3) and in Financial Statement's Notes 22 and 49.

OP Financial Group's risk management practices and goals can be found in Financial Statement's Notes 2 and 53. OP Financial Group's Corporate Governance and steering systems are available on websites covering respective issues (op.fi > OP Financial Group > About us > Corporate Governance) and in OP Financial Group's Corporate Governance Statement.

A description of the remuneration schemes and practices can be found in Financial Statement's Notes 50 and 51, OP Financial Group's website dealing with remuneration (op.fi > OP Financial Group > About us > Corporate governance > Remuneration) and in the Corporate Governance Statement.

OP Financial Group received IRBA permission in stages between 2008–2011. OP Financial Group has applied the Internal Ratings Based Approach (IRBA) to retail, credit institution and corporate exposures and equity investments. The Standardised Approach (SA) is used for other exposure categories. The Standardised Approach is used for OP Card Company's and new member cooperative banks' exposures. OP Card Company aims to adopt IRBA for its exposures. The new member cooperative banks aim to adopt IRBA after the supervisor has approved extended use of IRBA.

1 Capital base and capital adequacy

1.1 Capital base

EUR million	31 Dec. 2017	31 Dec. 2016
OP Financial Group's equity capital	11 121	10 237
The effect of insurance companies on the Group's shareholders' equity is excluded	92	-168
Fair value reserve, cash flow hedge	-16	-41
Supplementary cooperative capital to which transition provision applies		77
Common Equity Tier 1 (CET1) before deductions	11 197	10 105
Intangible assets	-717	-620
Excess funding of pension liability and valuation adjustments	-31	-64
Repayable cooperative capital	-148	-156
Expected profit distribution	-90	-83
Impairments – shortfall of expected losses	-320	-309
Common Equity Tier 1 (CET1)	9 891	8 872
Hybrid capital to which transitional provision is applied	81	81
Additional Tier 1 capital (AT1)	81	81
Tier 1 capital (T1)	9 973	8 954
Debenture loans	1 121	1 239
Tier 2 capital (T2)	1 121	1 239
Total capital base	11 093	10 192

The table presents how OP Amalgamation's CET1 capital derives from OP Financial Group's equity capital. CET1 capital increased by EUR 1,019 million. CET1 capital was increased by Banking performance, Profit Share issues and dividends from the Group's insurance institutions. Adjustments under IAS 19 reduced CET1 capital. The amount of Profit Shares in CET1 capital increased to EUR 2,760 billion (2,566), from which EUR 148 billion has been deducted related to Profit Shares refunded to customers in January 2018. In July 2017, supplementary cooperative capital worth EUR 70 million included in CET1 capital was refunded to customers. The amount of debenture loans included in Tier 2 capital (T2) decreased as the loans were transferred to the maturity of less than 5 years, in which case they are not included in the capital base in full.

EUR 20 (36) million of prudent valuation adjustment has been deducted from CET1 capital.

OP Financial Group has applied transitional provisions regarding old capital instruments to subordinated loans and a year ago to supplementary cooperative shares.

1.2 Overview of RWAs (EU-OV1)

	RWA	As	Minimum capital require- ments
EUR million	31 Dec. 2017	31 Sept. 2017	31 Dec. 2017
1 Credit risk (excluding CCR)	38 569	38 802	3 086
2 Of which the standardised approach	4 584	4 513	367
3 Of which the foundation IRB (FIRB) approach	22 024	22 099	1 762
4 Of which the advanced IRB (AIRB) approach	4 959	5 023	397
5 Of which equity IRB under the simple risk-weighted approach	541	706	43
5a Of which equity investments under PD/LGD method	6 461	6 461	517
6 CCR	694	699	55
7 Of which mark to market	489	493	39
12 Of which CVA	205	206	16
13 Settlement risk	1	0	0
14 Securitisation exposures in the banking book (after the cap)	42	54	3
15 Of which IRB approach	42	54	3
19 Market risk	1 178	1 988	94
20 Of which the standardised approach	1 178	1 988	94
23 Operational risk	3 958	3 958	317
25 Of which standardised approach	3 958	3 958	317
27 Amounts below the thresholds for deduction (subject to 250% risk weight)	283	271	23
29 Total	44 725	45 772	3 578
30 Risk weight floors based on ECB's decision	4 492	4 377	359
31 Total risk exposure amount including risk weight floors	49 216	50 149	3 937

Total risk exposure amount increased by 11.6% during the financial year; 88% of the increased being explained by the effect of the ECB's risk-weight floor. Excluding the risk-weight floor, the increase was moderate, 1.4%. The Group managed the increase in total risk exposure amount by optimising calculation and specifying definitions.

Risk weight floors based on the ECB's decision apply to corporate exposures of retail exposures other than SME corporate exposures. In these, floors set for the average risk weight are 15.4% for mortgage-backed securities and 32.7% for other than mortgage-backed securities. Point 2.16 presents average risk weights based on internal exposure models which the risk-weight floor does not affect. The ECB's risk-weight floor will be effective until at least Q3/2018.

1.3 Minimum capital requirement

OP Financial Group has used the Foundation Internal Ratings Based Approach (FIRB) to measure capital requirement for corporate and credit institution exposures. This approach uses internal credit ratings to determine a customer's probability of default (PD), whereas loss given default (LGD) and credit conversion factor (CCF) are regulatory standard estimates. The Group has used the Internal Ratings Based Approach (IRBA) to measure capital requirement for retail exposures. This approach uses internal credit ratings to determine a customer's PD. Also LGD and CF are estimated internally.

It is possible to use various methods to measure capital adequacy requirement for equity investments. In the PD/LGD method, investments' risk-weighted exposure is calculated using PD, based on internal credit rating, and a regulatory standard LGD. According to the Simple Risk Weight Approach, investments' risk-weighted exposure amount derives from multiplying each investment by the risk-weight determined by the type of investment.

OP Financial Group has used the Standardised Approach to measure capital requirement for operational risks and market risks.

1.4 Capital Ratios

	31 Dec.	31 Dec.
Ratios, %	2017	2016
CET1 capital ratio	20,1	20,1
Tier 1 ratio	20,3	20,3
Capital adequacy ratio	22,5	23.1

Ratios excluding the risk weight floors, %	31 Dec. 2017	31 Dec. 2016
CET1 capital ratio	22,1	20,1
Tier 1 ratio	22,3	20,3
Capital adequacy ratio	24,8	23,1

The risk weight floors set by the ECB decreased the CET1 ratio by 2.0 percentage points. An increase in CET1 capital exceeded an increase in total risk exposure amount resulting from growth in the loan portfolio. The effect of the calculated adjustments of defined benefit pension plans (IAS 19) on the Group's CET1 ratio was about –1.0 percentage points, or slightly lower than at the end of 2016.

	31 Dec.	31 Dec.
Ratios, fully loaded, %	2017	2016
CET1 capital ratio	20,1	19,9
Tier 1 ratio	20,1	19,9
Capital adequacy ratio	22,4	22,8

	31 Dec.	31 Dec.
Capital requirement, EUR million	2017	2016
Capital base	11 093	10 192
Capital requirement	7 027	5 520
Buffer for capital requirements	4 067	4 673

OP Financial Group's capital adequacy is on a solid basis compared to the statutory requirements and those set by the authorities. The capital requirement of 14.3% comprises the minimum requirement of 8%, the capital conservation buffer of 2.5%, the 0-SII buffer requirement of 2.0%, the minimum requirement of 1.75% (P2R) set by the ECB and the changing capital conservation buffers of 0.03% by country for foreign exposures. A year ago, the capital requirement was 12.5%. The ECB's P2R took effect on 1 January 2017.

2 Credit Risk

 $The figures \ presented \ in \ the \ credit \ risk \ section \ excludes \ items \ treated \ within \ the \ scope \ of \ counterparty \ credit \ risk.$

2.1 Total and average net amount of exposures (EU CRB-B)

The quality of the loan portfolio still remained good. Credit risk adjustments decreased slightly during the year and accumulated write-offs remained at the previous year's level. Credit risk adjustment charges for the period are presented in net terms.

Defaulted exposures are exposures belonging to rating categories 11–12 or F. In the Standardised Approach exposures are defaulted in case interest or capital are over 90 days overdue.

2.6 Credit quality of exposures by industry or counterparty types (EU CR1-B)

24 Total	1 274	133 045	427	71	74	-16	133 820

Credit risk adjustments in the real estate sector are low due to high collateral levels. The high amount of defaulted exposures in Agriculture, forestry and fishing relative to credit risk adjustments is explained by technical defaults resulting from aid payment schedules. The high amount of defaulted exposures in Mining and quarrying relative to exposures is due to individual cases with high exposure amount in comparison with the total exposure amount in the sector.

2.7 Credit quality of exposures by geography (EU CR1-C)

	a	b	С	d	e	f	g
	Gross carryl	Gross carrying values of		adjustments		Credit risk	
31 Dec. 2017, EUR million	Defaulted exposures	Non-defaulted exposures		General credit risk adjustment	Accumulated write-offs	adjustment charges of the period	Net values (a+b-c-d)
1 Finland	1 260	117 227	423	69	56	0	117 995
2 Other Nordic countries	2	3 480) 1		0	0	3 481

	a	b	С	d	е
31 Dec. 2017, EUR million	Exposures unsecured – Carrying amount	Exposures secured – Carrying amount	Exposures secured by collateral	Exposures secured by financial guarantees	Exposures secured by credit derivatives
1 Total loans	32 743	53 869	48 547	5 322	
2 Total debt securities	4 636	6 699	5 682	1 018	
3 Total exposures	71 850	61 971	54 953	7 018	
4 Of which defaulted	435	393	354	39	

In the IRBA applied to retail exposures, it is possible to use collateral securities on a more extensive basis than in the SA applied to credit institution and corporate exposures. Guarantees and collateral related to retail exposures are treated as part of LGD. Several collateral securities or guarantees may apply to the same exposure in the table.

In the SA and IRBA applied to credit institution and corporate exposures, OP Financial Group utilises the following real collateral securities specified in the capital adequacy regulations: residential buildings and shares entitling their holders to the possession of an apartment, deposits and securities (equities). Deposits and securities are financial collateral, as referred to in the regulatory framework, and alternative methods are available for their accounting treatment. OP Financial Group has treated financial collateral in the above approaches using the so-called comprehensive method and volatility adjustments given by the relevant regulator.

In the SA and IRBA applied to credit institution and corporate exposures, only approved guarantors specified in the capital adequacy regulations may be used, such as guarantees granted by the Finnish State and other states, and those granted by municipalities and banks. Credit derivatives have not been used in the calculation. Offsetting balance-sheet iron off-balance-sheet items was not applied in credit risk.

Residential buildings and shares entitling their holders to the possession of an apartment in Finland lodged as collateral constitute the largest collateral type used in capital adequacy. The effect of other physical securities on the capital adequacy of credit risks is much less significant. Guarantees used have been given by a number of sources, the largest single one being the State of Finland.

2.13 Collateral used in capital adequacy calculation

			Financial	Other
31 Dec. 2017, EUR million	Exposure	Guarantees	collateral	collateral
Standardised Approach	27 868	856	8	565
Exposures to central government and central banks	15 164	116	5	
Exposures to regional government or local authorities	3 788	231		
Exposures to public sector entities	341	279		
Exposures to multilateral development banks	724			
Exposures to international organisations	476	199

Simple Risk Weight Approach	166			
Items representing securitisation positions	518			
Other non-credit obligations	1 030			
Total	136 926	7 782	578	67 039

The table contains information on both credit risk and counterparty credit risk, i.e. the information does not match with the amounts of net exposures presented in other tables. The amount of immovable property collateral securities increased in proportion to exposures during the year. The amount of other collateral than that or immovable property and the amount of guarantees have remained at the same level.

2.14 Standardised approach - Credit risk exposure and CRM effects (EU CR4)

17 Total	21 677	169	378	142	1 396	2 181	19	113	89	26 165	6 462

In its capital adequacy measurement for credit risk under the Standardised Approach to determine the exposure's risk weight, OP Financial Group applies credit ratings by Moody's Investors Service, Fitch Ratings or Standard & Poor's Financial Services to receivables from central governments and central banks (and comparable items, above lines 2–5) and corporations. External credit assessment determines the receivable's credit rating category. In the capital adequacy requirement for receivables, the risk weight is determined by the credit rating category. If two credit rating applies to the counterparty or receivable, the lowest rating category is used to determine the rating category.

The risk weight of international development banks' receivables may also be determined on the basis of other than credit rating based on external credit assessment. If the risk weight is affected by external credit assessment, credit ratings issued by the aforementioned rating agencies will also apply to the risk weighting of international development banks' receivables in capital adequacy measurement.

For a receivable in capital adequacy measurement, the security-specific credit rating of the issue programme or arrangement to which the receivable belongs must be used. If such a rating is not available, the issuer's general credit rating will be used, provided that it is available. Items under the Standardised approach do not include items deducted from the capital base.

2.16 IRB approach - Credit risk exposures by exposure class and PD range (EU CR6)

The table below presents the PD class breakdown of credit exposures within the scope of the IRB approach, specification of risk parameters and other information. The defaults, or PD 100, are not included in the average PD and risk weight. The minimum PD is 0.03%. CCF stands for a credit conversion factor. Off-balance-sheet exposures include loans not drawn down and unused commitments. Exposure amounts do not include counterparty credit risk.

The risk parameters of retail exposures rose slightly on average during the year. Similarly, the average risk weight and the proportion of expected losses to EAD rose slightly.

In setting PD values given by rating models assessing solvency of personal customers' retail exposures, OP Financial Group has used its own default data and external data. As external data, OP Financial Group has made use of the unemployment rate since 1989. The Group has taken account of uncertainty associated with the data using a statistical margin of conservatism.

In setting PD values given by rating models assessing corporate customers in retail exposures, OP Financial Group has used its own default data and external data. As external data, the Group has used bankruptcy statistics since 1987. The Group has taken account of uncertainty associated with the data using a statistical margin of conservatism. The current corporate customer PDs in use were adopted in the first quarter of 2015.

In determining LGD estimates for retail exposures, the Group has used contract, customer, default, collateral and debt-collection data from 2008 until 2014. The Group applies the definition of default as in the PD models. In addition, the model uses product level cash flow data on uncollateralised returns and the recovery rate of default probabilities as well as recession valuation adjustments for collateral values based on the recession of the early 1990s.

In the risk weight calculation, the Group applies the LGD minimum of 10% and 15% to residential mortgage-backed exposures and commercial mortgage-backed exposures, respectively.

The average risk weights of mortgage-backed retail exposures increased slightly during the year and the average risk parameters remained at the same levels during the year. The risk weights of SME exposures decreased as a result of calculation optimisation. Considering that the one and the same customer may include in several sub-exposure classes, the sums of the number of debtors differ between the tables.

The risk weights of corporate exposures decreased during the year as a result of measurement optimisation. The average risk parameters improved slightly.

In setting PD values given by rating models assessing solvency of corporate customers' retail exposures, OP Financial Group has used its own default data and external data. As external data, the Group has used bankruptcy statistics since 1987. The Group has taken account of uncertainty associated with the data using a statistical margin of conservatism. The current corporate customer PDs in use were adopted in the first quarter of 2015.

The average risk weights of credit institution exposures decreased slightly during the year. The majority of the credit institution exposures are covered bonds.

For setting PD values given by the credit institution exposure rating model, OP Financial Group has used rating scores for credit institution exposure and external credit ratings and the corresponding default data. PD values have been adjusted with a margin of conservatism in order to take account of uncertainties associated with the data.

2.17 Equities (EU CR10, EU CR6)

Equities under the simple risk-weighted approach

Categories	On-balance- sheet amount	Off-balance- sheet amount	Risk weight	Exposure amount	RWAs	require- ments
Private equity exposures	31	8	190 %	39	74	6
Exchange-traded equity exposures	5		290 %	5	13	1
Other equity exposures	123		370 %	123	454	36
Total	159	8		166	541	43

Equity investments decreased during the year. Listed investments are measured at market value.

PD/LGD method

The PD/LGD method for equity investments has been used to treat the Group's strategic investments, of which the most significant ones (EAD EUR 2,306 million) include investments in the Group's insurance companies. In these exposures, EAD is the same as gross exposures and the exposures do not include off-balance-sheet items. PD for unlisted investments is 1.25 which is determined by regulation. No major changes have occurred in the amount of exposures. Maturity has been presented for instruments with a contractual maturity.

2.18 Non-deducted participations in insurance undertakings (EU INS1)

31 Dec. 2017, EUR million	Value
Holdings of own funds instruments of a financial sector entity where the institution has a significant investment not deducted from own funds (before risk-weighting)	2 306
Total RWAs	6 438

The Group treats insurance holdings in equity investments based on the supervisor's permission. In October 2015, the Group received permission from the ECB to treat insurance holdings within the conglomerate as risk-weighted assets according to the previous practice.

2.19 RWA flow statements of credit risk exposures under the IRB approach (EU-CR8)

		Capital require-
EUR million	RWA amounts	ments
1 RWAs as at the end of the previous reporting period	27 121	2 170
2 Asset size	451	36
3 Asset quality	-219	-18
4 Model updates	13	1
5 Methodology and policy	-384	-31
9 RWAs as at the end of the reporting period	26 983	2 159

Changes occurred in retail exposures, corporate exposures and credit institution exposures during the year are presented using the flow statements. Exposure amount increased risk-weighted assets and the credit quality improved especially in corporate exposures, which reduced risk-weighted assets. In retail exposures, the Group adopted a slight CF model change. The calculation was optimised especially in respect of corporate exposures related to SME relief factor.

2.20 IRB approach - Backtesting of PD per exposure class (EU CR9)

The following tables compare the probability of default (PD) applied in capital adequacy measurement with the actual historical average default. The calculation of the weighted average PD has not taken account of defaulted exposures (PD = 100%).

a	b	d	e		f	g	h	i

In calculating the historical default rate, the Group has used fives years as the average in other exposure classes but three years in exposures secured by real estate property. In retail exposures, the average PD is around 35% higher than the average historical default rate. The classification scale of retail exposures has not been linked to external credit ratings.

In the calculation of the historical default rate, the Group has used five years as the average. In corporate exposures, the average PD is around 144% higher than the average historical default rate. The external credit rating equivalent has been presented according to the credit rating by Standard & Poor's.

					Number	of obligors	•		Average

In the calculation of the historical default rate, the Group has used five years as the average. In credit institution exposures, the average PD is considerably higher than the average historical default rate. The Group applies the definition of default on a customer-specific basis to credit institution exposures. The external credit rating equivalent has been presented according to the credit rating by Standard & Poor's.

3 CCR and Market Risk

3.1 Analysis of CCR exposure by approach (EU CCR1)

Counterparty credit risk arising from derivative contracts is based on the daily market valuation of derivative contracts.

The size of customer limits are defined on the basis of assets included in derivative contracts and the estimated validity of the contracts.

Counterparty credit risk associated with derivative contracts arises from receivables which OP Financial Group may have from its counterparties in case they default. OP Financial Group measures counterparty credit risk using a fair value model, whereby the value of liability comprises the contract market value and the expected potential future exposure. The credit equivalent based on the fair value model is used both in the regulatory capital adequacy requirement and economic capital requirement.

The Group confirms corporate counterparty exposure limits once a year and in this connection also checks the status of collateral applying to the limits for derivative transactions.

Credit risk arising from bank counterparties is reduced through collateral, which means the use of ISDA Credit Support Annex (CSA) contract associated with the ISDA general agreement. In the collateral system, the counterparty provides cash or securities in security for the receivable. Collateral matching between counterparties are performed on a daily basis. In respect of guarantees and collateral securities, the Group applies the same practice as in credit risks. The Group ensures sufficient collateral as part of its daily liquidity management through stress tests.

If S&P had downgraded OP Financial Group's credit rating from AA- to A on 31 December 2017, an additional collateral worth EUR 7 million would have been required. If the credit rating had been downgraded in 2016, additional collateral of EUR 61 million would have been required.

Capital adequacy requirement due to counterparty credit risk may arise from items related to banking book and the trading book. Capital adequacy requirement due to counterparty credit risk is calculated, for example, on OTC derivatives and sale and repurchase agreements.

Changes in markets reduced the market value of derivatives during the year.

3.2 CVA capital charge (EU CCR2)

31 Dec. 2017, EUR million	Exposure value	RWAs
4 All portfolios subject to the standardised method	523	205

Upgrade in the credit ratings of counterparties within the scope of CVA capital requirements reduced risk-weighted assets. The average maturity of derivatives decreased, which reduced exposure amounts and thereby risk-weighted assets.

3.3 Standardised approach - CCR exposures by regulatory portfolio and risk (EU CCR3)

	Risk Weight						
Exposure classes, EUR million	0 %	2 %	50 %	100 %	Others	Total	Of which unrated

In corporate and credit institution exposures, a reduction in the average maturity and market prices decreased EAD during the year. In credit institution exposures, a rise in ratings has reduced the average risk weight. In addition, derivatives have been transferred to a central counterparty. No information has been presented on retail exposures because their EAD is less than EUR 500,000.

3.5 Impact of netting and collateral held on exposure values (EU CCR5-A)

a	b	C	d	е	
Gross positive	Netting	Netted current		Net credit	
fair value	benefits	credit exposure	Collateral held	exposure	
6 769	4 24	6 2 523	412	2 111	

The positive fair value of derivatives decreased with the market during the year. Benefits obtained from netting remained at the same level as a year ago. The amount of collateral decreased. The amount of net exposures decreased.

3.6 Composition of collateral for exposures to CCR (EU CCR5-B)

		D	C	u	
	Collate	Collateral used in derivative transactions			
	Fair value of colla	Fair value of collateral received Fair value of poste			
31 Dec. 2017, EUR million	Segregated	Unsegregated	Segregated	Unsegregated	
1 Cash		412	8	544	
2 Sovereign debt			137	174	

Collateral given to the central counterparty is segregated. Collateral with other counterparties are unsegregated. The majority of the collateral is cash.

3.7 Credit derivatives exposures (EU CCR6)

	a	D	L L
	Credit de	rivative hedges	
	Protection		Other credit
31 Dec. 2017, EUR million	bought	Protection sold	derivatives
Notionals			
Single-name credit default swaps		1	
Index credit default swaps		127	
Other credit derivatives		91	
Total notionals		219	
Fair values		3	
Positive fair value (asset)		9	
Negative fair value (liability)		-6	

The amount of credit derivatives was at the same level as a year ago.

3.8 Exposures to CCPs (EU CCR8)

	a	D
31 Dec. 2017, EUR million	EAD post CRM	RWAs
1 Exposures to QCCPs (total)	291	6
2 Exposures for trades at QCCPs (excluding initial margin and default fund contributions); of which	291	6
3 (i) OTC derivatives	291	6
7 Segregated initial margin	144	

The amount of exposures related to the central counterparty rose during the year. The initial margin depends on the risk level of the position; the margin amount decreased during the year with the risk level of the position.

3.9 Market risk under the standardised approach (EU MR1)

	a	D D
		Capital require-
31 Dec. 2017, EUR million	RWAs	ments
Outright products		
1 Interest rate risk (general and specific)	884	71
2 Equity risk (general and specific)	0	0
4 Commodity risk	19	2
Options		
6 Delta-plus method	275	22
9 Total	1 178	94

The general risk decreased during the year as a result of redefined trading book and banking book boundary. The specific risk increased due to the position increase and the deterioration of the average credit rating level. The risk-weighted assets based on the Delta-plus method decreased.

4 Securitisation positions

4.1 Securitisation positions

	2017		2016 Risk-	
Securitisation positions by rating category, Moody's equivalent, EUR million	Exposure	Risk-welghted assets	Exposure	weighted assets
Non-trading book positions Non-trading book positions	Exposure	assets	Exposure	assets
Securitisation positions	518	42	597	63
Aaa	488	36	562	42
A1–A3	21	3	24	4
Baa1-Baa3	9	3	4	2
Ba1–Ba3			6	16
Total	518	42	597	63

OP Financial Group acts as an investor in the securitisation process and it has no resecuritised positions. Securitised positions did not include past due or impaired receivables.

The IRBA has been applied to securitisation positions. OP Financial Group pays special attention to bonds' structural and collateral-related features in its investment in securitised assets.

OP Financial Group follows regularly changes related to the credit and market risk of securitised loans.

5 Scope of application, capital base and countercyclical capital buffer

5.1 Differences between accounting and regulatory scopes of consolidation and the mapping of financial statement categories with regulatory risk categories (EU LI1)

	a	b	С	d	е	f	g	
				Carr	ying values of ite	ems		
31 Dec 2017, EUR million	Carrying values as reported in published financial statements	Carrying values under scope of regulatory consolidation	Subject to the credit risk framework	Subject to the CCR framework	Subject to the securitisation framework	Subject to the market risk framework	Not subject to capital require- ments or subject to deduction from capital

Actuarial gains and losses	-486	-473					-473	
Profit for the financial year	849	1 011					1 011	
Non-controlling interests	101							
Total equity capital	11 121	11 213					11 213	
Total liabilities and equity capital	137 242	117 533		3 025			117 533	

The differences between the balance sheets of OP Financial Group and the consolidation group are due to differences in the content and extent of consolidation. Within the consolidation group, insurance companies have not been consolidated but are shown in investments made by the consolidation group and the insurance companies' equity capital is not included in the equity capital of the consolidation group. The consolidation group has applied the materiality threshold specified in Article 19 of CRR in the consolidation of its companies. Points 1.1 and 5.4 present items deducted from the capital base.

5.2 Main sources of differences between regulatory exposure amounts and carrying values in financial statements (EU LI2)

	a	b	С	d	е
	Items subject to			ject to	
	-	Credit risk		Securitisation	
1 Dec 2017, EUR million	Total	framework	CCR framework	framework	Market risk
1 Assets carrying value amount under the scope of regulatory consolidation (as per template EU LI1)	117 086	112 147	3 563	518	858
4 Off-balance-sheet amounts	22 363	22 363			
6 Differences due to different netting rules, other than those already included in row 2	-1 451		-1 451		
7 Differences due to consideration of provisions	479	479			
9 Other adjustments	-1 169	-1 169			
10 Exposure amounts considered for regulatory purposes	137 308	133 820	2 111	518	858

In capital adequacy regulation, it is possible to take account of netting on a more extensive basis than in account. Given that certain accounting items cannot be unambiguously divided into risk types, these items have been removed from calculation to avoid their overlapping treatment.

5.3 Outline of the differences in the scopes of consolidation (entity by entity) (EU LI3)

	a	b	С	d	e	f

According to the definition of the consolidation group, insurance companies have not been consolidated into capital adequacy but are treated as investments. Other non-consolidated entities are less than EUR 10 in terms of their balance sheet. There are no investments that are deducted from own funds.

5.4 Capital base under transitional provisions

According to the European Commission implementing regulation, a credit institution must present its own funds using the transition period model for disclosure for own funds determined by the European Banking Authority.

Table LRQua: Free format text boxes for disclosure on qualitative items Description of the processes used to manage the risk of excessive leverage

By means of ALM and capital management, the Group ensures that leverage will remain controlled in view of maturity transformation and that adequate tools will remain available for leverage management. OP Financial Group has set its capital adequacy target sufficiently high, in which case leverage will not be high or the minimum leverage ratio will not decrease close to the minimum level. The Group monitors leverage by means of its internal target levels for the leverage ratio and of capital adequacy; in addition, the Group monitors, for example, the net stable funding ratio (NSFR) and the asset encumbrance (AE).

2 Description of the factors that had an impact on the leverage Ratio during the period to which the disclosed leverage Ratio refers

Exposures in the balance sheet increased less than the capital base. As a result, the leverage ratio rose. The balance sheet grew in line with the growth targets set for the loan portfolio and the liquidity buffer. The Report by the Executive Board describes changes in the operating environment.

7.2 Disclosure on asset encumbrance

The tables below provide information on asset encumbrance and liabilities related to encumbered assets. The figures are presented as the quarterly median for 2017. An asset is considered encumbered if it has been pledged or given as collateral or they secure transactions recognised in the balance sheet (e.g. to secure debt). Other assets that are not freely available within the Group are also classified as encumbered. Encumbered assets mainly relate to collateral pertaining to OP Corporate Bank plc's derivatives, loans with collateral of central bank refinancing and collateral with respect to covered bonds issued by OP Mortgage Bank. Of the collateral related to covered bonds, EUR 2 128 million is overcollateralised. 41% of unencumbered assets is not eligible as collateral (e.g. intangible assets, and property, plant and equipment, adjusting entries for assets and tax assets).

Assets, EUR million		Fair value of encumbered assets	Carrying amount of unen- cumbered assets	Fair value of un- encumbered assets
Equity instruments			136	136
Debt securities	2 210	2 209	10 384	10 390
Loans	14 228		66 894	
Other assets	862		20 548	
Total assets	17 300	2 209	97 962	10 526

The table below presents collateral received by asset type
