Annex 1. Main features of capital instruments

Introduction

This report discloses information on the capital adequacy of the consolidated group of the amalgamation of member cooperative banks, as specified in Part 8 of the Capital Requirements Regulation of the European Parliament and of the Council No. 575/2013 (CRR) (Pillar III disclosures) in compliance with the guidelines issued by the European Banking Authority (EBA/GL)/2016/11). Given that this information is based on the consolidated capital adequacy on the amalgamation of member cooperative banks, it is not directly comparable with information disclosed on OP Financial Group. The Report is unaudited.

The amalgamation of cooperative banks consists of the amalgamation's central cooperative (OP Cooperative), the central cooperative's member credit institutions and the companies belonging to their consolidation groups. Although OP Financial Group's insurance companies do not belong to the amalgamation of the cooperative banks, investments made in them have a major impact on capital adequacy calculated in accordance with the capital adequacy regulations for credit institutions. More detailed information on companies within the consolidation group can be found in point 5.3 (LI3) and in Financial Statement's Notes 22 and 45.

OP Financial Group's risk management practices and goals can be found in the 2019 Financial Statements Notes 2 and 51. OP Financial Group's Corporate Governance and steering systems are available on websites covering respective issues (op.fi > OP Financial Group > About us > Corporate Governance) and in OP Financial Group's Corporate Governance Statement.

A description of the remuneration schemes and practices can be found in Notes 47 and 48 in the financial statements 2019, OP Financial Group's website dealing with remuneration (op.fi > OP Financial Group > About us > Corporate governance > Remuneration) as well as in OP Financial Group's Remuneration Statement and Corporate Governance Statement.

OP Financial Group received IRBA permission in stages between 2008–2011. OP Financial Group has applied the Internal Ratings Based Approach (IRBA) to retail, credit institution and corporate exposures and equity investments. The Standardised Approach (SA) is used for other exposure categories. The Standardised Approach is used for OP Card Company's exposures. OP Card Company aims to adopt IRBA for its exposures. In the calculation of capital adequacy and the leverage ratio, the Group has not applied the IFRS 9 transitional provision.

1 Capital base and capital adequacy

1.1 Capital base

EUR million	31 Dec. 2019	31 Dec. 2018
OP Financial Group's equity capital	12,570	11,835
The effect of insurance companies on the Group's shareholders' equity is excluded	-237	7 189
Fair value reserve, cash flow hedge	-141	1 -33
Common Equity Tier 1 (CET1) before deductions	12,192	2 11,991
Intangible assets	-630	710
Excess funding of pension liability and valuation adjustments	-76	5 -76
Items deducted from cooperative capital	-142	2 -147
Expected profit distribution	-97	7 -94
Shortfall of ECL minus expected losses	-428	3 -288
Common Equity Tier 1 (CET1)	10,819	10,677
Hybrid capital to which transitional provision is applied	60	0 80
Additional Tier 1 capital (AT1)	60	08 0
Tier 1 capital (T1)	10,879	10,757
Debenture loans	806	5 995
Tier 2 capital (T2)	806	995
Total capital base	11,685	11,752

The table presents how OP Amalgamation's CET1 capital derives from OP Financial Group's equity capital. The CET1 capital was increased by banking earnings and decreased by a higher expected loss (EL) caused by growth in risk parameters and by the change in the accounting policy applied to certain income from derivatives, which was not restated in the comparatives for capital adequacy measurement. The amount of Profit Shares in CET1 capital was EUR 2.9 billion (2.9). The amount of debenture loans included in Tier 2 capital (T2) decreased as the loans were transferred to the maturity of less than 5 years, in which case they are not included in the capital base in full.

OP Financial Group has applied transitional provisions regarding old capital instruments to subordinated loans.

1.2 Overview of RWAs (EU-0V1)

			Minimum capital require
DID. W	31 Dec. 2019	VAs 30 Sept. 2019	ments
EUR million			
1 Credit risk (excluding CCR)	48,385	48,523	3,871
2 Of which the standardised approach	5,061	5,246	
3 Of which the foundation IRB (FIRB) approach	26,105	26,048	2,088
4 Of which the advanced IRB (AIRB) approach	10,320	10,396	826
5 Of which equity IRB under the simple risk-weighted approach	451	383	36
5a Of which equity investments under PD/LGD method	6,447	6,450	516
6 CCR	698	821	56
7 Of which mark to market	506	623	40
12 Of which CVA	191	198	15
13 Settlement risk	0		0
14 Securitisation exposures in the banking book (after the cap)	46	43	4
15 Of which IRB approach	46	43	4
19 Market risk	1,309	1,397	105
20 Of which the standardised approach	1,309	1,397	105
23 Operational risk	4,232	4,232	339
25 Of which standardised approach	4,232	4,232	339
27 Amounts below the thresholds for deduction (subject to 250% risk weight)	279	219	22
27a Other risks	11	21	1
29 Total	54,959	55,256	4,397
30 Risk weight floors based on ECB's decision	505	678	40
31 Total risk exposure amount including risk weight floors	55,464	55,934	4,437

The risk exposure amount (REA) totalled EUR 55.5 billion (52.1), or 6% higher than on 31 December 2018. The risk-weight floor for retail exposures set by the ECB decreased to EUR 0.5 billion, due to an increase in the risk weights of mortgage-backed retail exposures. The average risk weights of retail exposures increased as a result of added conservatism in risk parameters and of risk parameter factors set by the ECB. The loan portfolio grew in corporate and retail exposures.

On 25 April 2019, OP Financial Group received the ECB's decision on increases in the risk weights of mortgage-backed retail exposures as part of the targeted review of internal models (TRIM). These risk weight increases will be valid until further notice, until the qualitative requirements set out in the decision have been met. The decision has no substantial effect on OP Financial Group's capital adequacy in the current situation where both the IRBA risk weight floor set previously by the ECB and the 15% risk weight floor on home loans set by the Finnish Financial Supervisory Authority are in force. The ECB's risk weight floors apply to retail exposures other than SME corporate exposures. In these, floors set for the average risk weight are 15.4% for mortgage-backed securities and 32.7% for other than mortgage-backed securities.

1.3 Minimum capital requirement

OP Financial Group has used the Foundation Internal Ratings Based Approach (FIRB) to measure capital requirement for corporate and credit institution exposures. This approach uses internal credit ratings to determine a customer's probability of default (PD), whereas loss given default (LGD) and credit conversion factor (CCF) are regulatory standard estimates. The Group has used the Internal Ratings Based Approach (IRBA) to measure capital requirement for retail exposures. This approach uses internal credit ratings to determine a customer's PD. Also LGD and CCF are estimated internally.

It is possible to use various methods to measure capital adequacy requirement for equity investments. In the PD/LGD method, investments' risk-weighted exposure is calculated using PD, based on internal credit rating, and a regulatory standard LGD. According to the Simple Risk Weight Approach, investments' risk-weighted exposure amount derives from multiplying each investment by the risk-weight determined by the type of investment.

OP Financial Group has used the Standardised Approach to measure capital requirement for operational risks and market risks.

Total risk exposure amount including risk weight floors	4,437	55,464	4,170	52,126

^{*} Capital requirement = Risk-weighted assets x 0.08

1.4 Capital Ratios

Ratios, %	2019	2018
CET1 capital ratio	19.5	20.5
Tier 1 ratio	19.6	20.6
Capital adequacy ratio	21.1	22.5
	31 Dec.	31 Dec.
Ratios, fully loaded, %	2019	2018
CET1 capital ratio	19.5	20.5
Tier 1 ratio	19.5	20.5
Capital adequacy ratio	21.0	22.4

The lower ratio was affected by an increase in the loan portfolio and increase in the risk weights of retail exposures.

Capital requirement, EUR million	31 Dec. 2019	31 Dec. 2018
Capital base	11,685	11,752
Capital requirement	8,068	7,448
Buffer for capital requirements	3 617	4 304

As a credit institution, OP Financial Group's capital adequacy is on a solid basis compared to the statutory requirements and those set by the authorities. The capital requirement of 14.5% comprises the minimum requirement of 8%, the capital conservation buffer of 2.5%, the 0–SII buffer requirement of 2.0%, the minimum requirement (P2R) of 2.0% (1.75 a year ago) set by the ECB and the changing capital conservation buffers by country for foreign exposures. As of 1 January 2020, the ECB has set the capital buffer requirement (P2R) at 2.25%. Accordingly, the new minimum CET1 ratio will be 11.3% and the new minimum capital adequacy ratio 14.8%.

In OP Financial Group's view, the most significant open changes in the regulatory and supervisory environment affecting capital adequacy for credit institutions include obligations, if any, imposed by the supervisor due to ECB's targeted review of internal (IRBA) models (TRIM), and obligations imposed by the supervisor due to the new definition of default. The process based on the new definition of default recognises defaulted customers earlier, for example, based on information in external credit registers or in retail customers by extending the default to cover all exposures of an individual obligor. This new definition is expected to mean a larger number of default observations and to weaken credit risk parameters. OP Financial Group will apply a so-called Two-Step Approach. The first step involves the change of the definition of default, which is planned to take place in March 2020. The second step to be taken later involves the calibration of credit risk parameters. The supervisory obligation related to the adoption of the new definition of default is expected to weaken OP Financial Group's CET1 ratio by 1.3 percentage points in the first stage. The effects of the ECB's targeted review of internal (IRBA) models (TRIM) on corporate exposures are still open. More detailed information on the effects is expected in the first half of 2020.

A total of 89% of total exposures are in Finland. A total of 91% of exposures within the scope of IRBA are in Finland. No substantial changes have taken place in the geographical breakdown of exposures.

2.3 Concentration of exposures by industry or counterparty types (EU CRB-D)

39 Of which: Off-balance-sheet exposures	133	25,462	2		-3	25,592

The quality of the loan portfolio remained good. Defaulted exposures increased over the previous year. Credit risk adjustment charges for the period are presented in net terms for the whole year. Defaulted exposures are exposures belonging to rating categories 11–12 or F. In the Standardised Approach exposures are defaulted in case interest or capital are over 90 days overdue.

2.6 Credit quality of exposures by industry or counterparty types (EU CR1-B)

23 households for own use	2	576	2	1	0	576
24 Public administration and defence (incl. compulsory social security)		5,378	1		0	5,377
25 Activities of extraterritorial organisations and bodies	0	0	0		0	0
26 Households	338	52,723	93	31		52,968
24 Total	1,407	144,770	577	68	32	145,600

Credit risk adjustments in the real estate sector are low due to extensive collateral securities. The defaulted exposure amount in the construction industry increased as the general industry outlook became weaker. The amount of defaulted exposures in Agriculture, forestry and fishing relative to credit risk adjustments is explained by technical defaults resulting from aid payment schedules. The high amount of defaulted exposures in Forest industry, Mining and quarrying relative to exposures is due to individual cases where the exposure amount is highlighted in comparison with the total exposure amount in the sector.

2.7 Credit quality of exposures by geography (EU CR1-C)

	a	b	c	е	f	g
	Gross carryi	ng values of			Credit risk	
	54		Specific credit		adjustment	
	Defaulted	Non-defaulted	risk	Accumulated	charges of the	Net values

8 Other	2	1,337	1	0	0	1,338
11 Total	1,407	144,770	577	68	32	145,600

A total of 89% of total exposures are in Finland and other distribution is presented applying the materiality principle. A total of 98% of defaulted exposures and 98% credit risk adjustments are in Finland.

2.8 Changes in the stock of general and specific credit risk adjustments (EU CR2-A)

	a
	Accumulated
	specific credit
	risk
Net value, 31 Dec. 2019, EUR million	adjustment
1 Opening balance 30 June 2019	546
2 Increases due to amounts set aside for estimated loan losses during the period	119
3 Decreases due to amounts reversed for estimated loan losses during the period	-49
4 Decreases due to amounts taken against accumulated credit risk adjustments	-31
9 Closing balance 31 Dec 2019	577

Credit risk adjustments under IFRS 9 (ECL) are presented as specific credit risk adjustments. Impairment loss changes have been presented for the latter half of the year.

2.9 Changes in the stock of defaulted and impaired loans and debt securities (EU CR2-B)

	Gross carrying value
Net value, 31 Dec. 2019, EUR million	defaulted exposures
1 Opening balance 30 June 2019	1,248
2 Loans and debt securities that have defaulted or impaired since the last reporting period	285
3 Returned to non-defaulted status	-90
4 Amounts written off	-38
5 Other changes	3
6 Closing balance 31 Dec 2019	1,407

Defaulted exposures increased from the previous year.

2.10 CRM techniques – Overview (EU CR3)

	a	b	С	d	е
	Exposures	Exposures		Exposures	Exposures
	unsecured -	secured -	Exposures	secured by	secured by
	Carrying	Carrying	secured by	financial	credit
Net value, 31 Dec. 2019, EUR million	amount	amount	collateral	guarantees	derivatives
1 Total loans	36,071	60,314	54,844	5,469	
2 Total debt securities	4,975	6,983	6,486	497	
3 Total exposures	76,594	69,006	62,672	6,334	
4 Of which defaulted	488	440	395	45	

In the IRBA applied to retail exposures, it is possible to use collateral securities on a more extensive basis than in the SA applied to credit institution and corporate exposures. Guarantees and collateral related to retail exposures are treated as part of LGD. Several collateral securities or guarantees may apply to the same exposure in the table.

In the SA and IRBA applied to credit institution and corporate exposures, OP Financial Group utilises the following real collateral securities specified in the capital adequacy regulations: residential buildings and shares entitling their holders to the possession of an apartment, deposits and securities (equities). Deposits and securities are financial collateral, as referred to in the regulatory framework, and alternative methods are available for their accounting treatment. OP Financial Group has treated financial collateral in the above approaches using the so-called comprehensive method and volatility adjustments given by the relevant regulator.

In the SA and IRBA applied to credit institution and corporate exposures, only approved guarantors specified in the capital adequacy regulations may be used, such as guarantees granted by the Finnish State and other states, and those granted by municipalities and banks. Credit derivatives have not been used in the calculation. Offsetting balance-sheet or off-balance-sheet items was not applied in credit risk.

Residential buildings and shares entitling their holders to the possession of an apartment in Finland lodged as collateral constitute the largest collateral type used in capital adequacy. The effect of other physical securities on the capital adequacy of credit risks is much less significant. Guarantees have been given by a number of sources, the largest single one being the State of Finland.

2.11 Collateral used in capital adequacy calculation

			Eta a a stat	Other
31 Dec. 2019, EUR million	Exposure	Guarantees	Financial collateral	Other collateral
Standardised Approach	28,559	109		
Exposures to central government and central banks	14,574			
Exposures to regional government or local authorities	5,193			
Exposures to public sector entities	267	109		
Exposures to multilateral development banks	596			
Exposures to international organisations	525			
Exposures to institutions	360			
Exposures to corporates	3,062			
Retail exposures	3,901			
Exposures secured by mortgages on immovable property	1			1
Exposures in default	30			
Exposures in the form of units or shares in collective investment undertakings (CIU)	0			
Equity exposures	22			
Other items	30			
Internal Ratings-based Approach	121,137	6,843	1,025	75,879
Exposures to institutions	8,557	210	453	0
Exposures to corporates	51,102	3,065	341	5,518
Retail exposures	57,166	3,568	231	70,361
Exposures secured by mortgages on immovable property	47,943	1,097	144	69,133
Other retail exposures	9,223	2,471	87	1,228
Equity investments	2,441			
PD/LGD method	2,309			
Simple Risk Weight Approach	132			
Items representing securitisation positions	624			
Other non-credit obligations	1,247			
Total	149,696	6,953	1,025	75,880

The table contains information on both credit risk and counterparty risk, i.e. the information does not match with the amounts of net exposures presented in other tables. The amount of immovable property collateral securities is not comparable with that previously reported due to change in reporting. The amount of guarantees has increased from the end of 2018.

2.12 Standardised approach – Credit risk exposure and CRM effects (EU CR4)

	a	b	c	d	е	f
	Exposures before	e CCF and CRM	Exposures post	t CCF and CRM	RWAs and RW	/A density (%)
	On-balance-	Off-balance-	On-balance-	Off-balance-		RWA density

17 Total	21,428	97		1	1,414	2,627	7	112	132	25,817	20,505

In its capital adequacy measurement for credit risk under the Standardised Approach to determine the exposure's risk weight, OP Financial Group applies credit ratings by Moody's Investors Service, Fitch Ratings or Standard & Poor's Financial Services to receivables from central governments and central banks (and comparable items, above lines 2–5) and corporations. External credit assessment determines the receivable's credit rating category. In the capital adequacy requirement for receivables, the risk weight is determined by the credit rating category. If two credit rating applies to the counterparty or receivable, the lowest rating category is used to determine the rating category.

The risk weight of international development banks' receivables may also be determined on the basis of other than credit rating based on external credit assessment. If the risk weight is affected by external credit assessment, credit ratings issued by the aforementioned rating agencies will also apply to the risk weighting of international development banks' receivables in capital adequacy

For a receivable in capital adequacy measurement, the security-specific credit rating of the issue programme or arrangement to which the receivable belongs must be used. If such a rating is not available, the issuer's general credit rating will be used, provided that it is available. Items under the Standardised approach do not include items deducted from the capital base.

2.14 IRB approach – Credit risk exposures by exposure class and PD range (EU CR6)

The table below presents the PD class breakdown of credit exposures within the scope of the IRB approach, specification of risk parameters and other information. The defaults, or PD 100, are not included in the average PD and risk weight. The minimum PD is 0.03%. CCF stands for a credit conversion factor. Off-balance-sheet exposures include loans not drawn down and unused commitments. Exposure amounts do not include counterparty credit risk.

The average private customer PDs and LGDs increased especially as a result of the ECB's risk parameter factors, and conservatism added to the models also increased the parameters. The higher risk parameters also had an impact on the average risk weight and expected losses.

In setting PD values given by rating models assessing solvency of personal customers' retail exposures, OP Financial Group has used its own default data and external data. As external data, OP Financial Group has made use of the unemployment rate since 1989. The Group has taken account of uncertainty associated with the data using a statistical margin of conservatism.

In setting PD values given by rating models assessing corporate customers in retail exposures, OP Financial Group has used its own default data and external data. As external data, the Group has used bankruptcy statistics since 1987. The Group has taken account of uncertainty associated with the data using a statistical margin of conservatism. The current corporate customer PDs in use were adopted in the first quarter of 2015.

In determining LGD estimates for retail exposures, the Group has used contract, customer, default, collateral and debt-collection data from 2008 until 2014. The Group applies the definition of default as in the PD models. In addition, the model uses product level cash flow data on uncollateralised returns and the recovery rate of default probabilities as well as recession valuation adjustments for collateral values based on the recession of the early 1990s. The Group has taken account of uncertainty associated with the data using a margin of conservatism.

In the risk weight calculation, the Group applies the regulatory LGD minimum of 10% and 15% to residential mortgage-backed exposures and commercial mortgage-backed exposures, respectively.

The average PD and LGD of risk weights of mortgage-backed retail exposures increased, especially as a result of the ECB's risk parameter factors, conservatism added to the models increased the parameters while the average risk weight also increased from the end of 2018. Considering that the one and the same customer may include in several sub-exposure classes, the sums of the number of obligors differ between the tables.

The average risk weight of corporate exposures increased slightly from the 2018-end level.

In setting PD values given by rating models assessing solvency of corporate customers' retail exposures, OP Financial Group has used its own default data and external data. As external data, the Group has used bankruptcy statistics since 1987. The Group has taken account of uncertainty associated with the data using a statistical margin of conservatism. The current corporate customer PDs in use were adopted in the first quarter of 2015.

The average risk weights of credit institution exposures decreased slightly during the year. Some 88% of the credit institution exposures are covered bonds.

For setting PD values given by the credit institution exposure rating model, OP Financial Group has used rating scores for credit institution exposure and external credit ratings and the corresponding default data. PD values have been adjusted with a margin of conservatism in order to take account of uncertainties associated with the data.

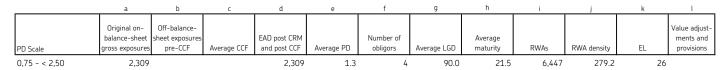

2.15 Equities (EU CR10, EU CR6)

Equities under the simple risk-weighted approach

	On-balance-	Off-balance-		Exposure		Capital require-
Categories	sheet amount	sheet amount	Risk weight	amount	RWAs	ments
Private equity exposures	21		190 %	21	39	3
Other equity exposures	111		370 %	111	412	33
Total	132			132	451	36

Equity investments increased slightly during the year. Listed investments are measured at market value.

PD/LGD method

The PD/LGD method for equity investments has been used to treat the Group's strategic investments, of which the most significant ones (EAD EUR 2,306 million) include investments in the Group's insurance companies. In these exposures, EAD is the same as gross exposures and the exposures do not include off-balance-sheet items. PD for unlisted investments is 1.25 which is determined by regulation. No major changes have occurred in the amount of exposures. Maturity has been presented for instruments with a contractual maturity.

2.16 Non-deducted participations in insurance undertakings (EU INS1)

31 Dec. 2019, EUR million	value	1
Holdings of own funds instruments of a financial sector entity where the institution has a significant investment not deducted from own funds (before risk-weighting)	2,306	
Total RWAs	6,438	

The Group treats insurance holdings in equity investments based on the supervisor's permission. In October 2015, the Group received permission from the ECB to treat insurance holdings within the conglomerate as risk-weighted assets according to the previous practice.

2.17 RWA flow statements of credit risk exposures under the IRB approach (EU-CR8)

	a	D
		Capital
EUR million	RWA amounts	require- ments
1 RWAs as at the end of the previous reporting period 30 Sept 2019	36,444	2,307
2 Asset size	0	0
3 Asset quality	-18	-1
9 RWAs as at the end of the reporting period 31 Dec 2019	36,425	2,914

Changes occurred in retail exposures, corporate exposures and credit institution exposures during the last quarter are presented using the flow statements. No major changes took place in risk-weighted assets.

2.18 IRB approach – Backtesting of PD per exposure class (EU CR9)

The following tables compare the probability of default (PD) applied in capital adequacy measurement with the actual historical average default. The calculation of the weighted average PD has not taken account of defaulted exposures (PD = 100%).

	Total	3.9 %	4.8 %	29,661	30,019	1,118	476	2.3 %

In calculating the historical default rate, the Group has used seven years as the average in other exposure classes but five years in exposures secured by real estate property. In retail exposures, the average PD is around 40% higher than the average historical default rate. The classification scale of retail exposures has not been linked to external credit ratings.

In the calculation of the historical default rate, the Group has used six years as the average. In corporate exposures, the average PD is around 50% higher than the average historical default rate. The external credit rating equivalent has been presented according to the credit rating by Standard & Poor's.

In the calculation of the historical default rate, the Group has used six years as the average. In credit institution exposures, the average PD is considerably higher than the average historical default rate. The Group applies the definition of default on a customer-specific basis to credit institution exposures. The external credit rating equivalent has been presented according to the credit rating by Standard & Poor's.

3 CCR and Market Risk

3.1 Analysis of CCR exposure by approach (EU CCR1)

Counterparty credit risk arising from derivative contracts is based on the daily market valuation of derivative contracts.

The size of customer limits are defined on the basis of assets included in derivative contracts and the estimated validity of the contracts.

Counterparty credit risk associated with derivative contracts arises from receivables which OP Financial Group may have from its counterparties in case they default. OP Financial Group measures counterparty risk using a fair value model, whereby the value of exposure comprises the contract market value and the expected potential future exposure. The exposure amount based on the fair value model is used in the calculation of regulatory capital requirement and of economic capital.

The Group confirms corporate counterparty exposure limits once a year and in this connection also checks the status of collateral applying to the limits for derivative transactions.

Credit risk arising from bank counterparties is reduced through collateral, which means the use of ISDA Credit Support Annex (CSA) contract associated with the ISDA general agreement. In the collateral system, the counterparty provides cash or securities in security for the receivable. Collateral matching between counterparties are performed on a daily basis. In respect of guarantees and collateral securities, the Group applies the same practice as in credit risks. The Group ensures sufficient collateral as part of its daily liquidity management through stress tests.

If S&P had downgraded OP Financial Group's credit rating from AA- to A on 31 December 2019, an additional collateral worth EUR 55 million would have been required. If the credit rating had been downgraded in 2018, additional collateral of EUR 59 million would have been required.

Capital adequacy requirement due to counterparty credit risk may arise from items related to banking book and the trading book. Capital adequacy requirement due to counterparty credit risk is calculated, for example, on OTC derivatives and sale and repurchase agreements.

	b	C	f	g	
	Replaceme	I			
	cost/curren	 Potential future 			
Net value, 31 Dec. 2019, EUR million	market val	e credit exposure	EAD post CRM	RWAs	
1 Mark to market	2.0	57 828	2.896	506	

Counterparty credit risk exposures increased from their level at the end of 2018.

3.2 CVA capital charge (EU CCR2)

	a	D
Net value, 31 Dec. 2019, EUR million	Exposure value	RWAs
4 All portfolios subject to the standardised method	291	191
5 Total subject to the CVA capital charge	291	191

No major changes took place in the CVA capital requirement.

3.3 Standardised approach – CCR exposures by regulatory portfolio and risk (EU CCR3)

	Risk Weight						
Exposure classes, EUR million	0 %	2 %	50 %	100 %	Others	Total	Of which unrated
1 Central governments or central banks	283					283	
2 Regional government or local authorities	376					376

Total	735	0.1 %	46	0.0 %	9.7	111	15.1 %

The average risk weights of corporate exposures and credit institution exposures decreased form their 2018-end level. No information has been presented on retail exposures; the amount of counterparty risk exposures under retail exposures is not material.

3.5 Impact of netting and collateral held on exposure values (EU CCR5-A)

	a	b	c	d	е
	Gross positive		Netted current		Net credit
Net value, 31 Dec. 2019, EUR million	fair value	Netting benefits	credit exposure	Collateral held	exposure
1 Derivatives	5,506	1,903	3,603	707	2,896
4 Total	5,506	1,903	3,603	707	2,896

The positive gross fair value of derivatives increased from the 2018-level and the amount of collateral securities and net exposures increased too.

3.6 Composition of collateral for exposures to CCR (EU CCR5-B)

	a	b	C	d		
	Collateral used in derivative transactions					
	Fair value of collateral received Fair value of poste			lue of posted collateral		
Net value, 31 Dec. 2019, EUR million	Segregated	Unsegregated	Segregated	Unsegregated		
1 Cash		707	0		432	
2 Sovereign debt			375		222	

Collateral given to the central counterparty is segregated. Collateral with other counterparties are unsegregated. The majority of the collateral is cash.

3.7 Credit derivatives exposures (EU CCR6)

	a	b	С
	Credit deriv	ative hedges	
Net value, 31 Dec. 2019, EUR million	Protection bought	Protection sold	Other credit derivatives
Notionals	•	•	
Index credit default swaps		153	
Other credit derivatives		80	
Total notionals		233	
Fair values		0	
Positive fair value (asset)		4	
Negative fair value (liability)		-4	

The amount of credit derivatives was at the same level as at the end of 2018.

3.8 Exposures to CCPs (EU CCR8)

	a	D
Net value, 31 Dec. 2019, EUR million	EAD post CRM	RWAs
1 Exposures to QCCPs (total)	326	7
2 Exposures for trades at QCCPs (excluding initial margin and default fund contributions); of which	326	7
3 (i) OTC derivatives	326	7
7 Segregated initial margin	375	

The amount of exposures related to the central counterparty increased slightly during the year. The initial margin depends on the risk level of the position; the margin amount increased during the year.

3.9 Market risk under the standardised approach (EU MR1)

	a	b
		Capital
		require-
Net value, 31 Dec. 2019, EUR million	RWAs	ments
Outright products		
1 Interest rate risk (general and specific)	1,159	93
2 Equity risk (general and specific)	0	0
4 Commodity risk	1	0
Options		
6 Delta-plus method	148	12
9 Total	1,309	105

The general risk increased slightly during the year. The specific risk increased slightly due to the position increase and the deterioration of the average credit rating level. The amount of the risk-weighted assets based on the Delta-plus method decreased.

4 Securitisation positions

4.1 Securitisation positions

	2019		20	18
		Risk-weighted		Risk-weighted
Securitisation positions by rating category, Moody's equivalent, EUR million	Exposure	assets	Exposure	assets
Non-trading book positions				
Securitisation positions				
Aaa	624	46		
A1-A3			613	46
Baa1–Baa3				
Total	624	46	613	46

OP Financial Group acts as an investor in the securitisation process and it has no resecuritised positions. Securitised positions did not contain past due or impaired receivables.

The IRBA has been applied to securitisation positions. OP Financial Group pays special attention to bonds' structural and collateral-related features in its investment in securitised assets.

 ${\tt OP}\ {\sf Financial}\ {\sf Group}\ {\sf follows}\ {\sf regularly}\ {\sf changes}\ {\sf related}\ {\sf to}\ {\sf the}\ {\sf credit}\ {\sf and}\ {\sf market}\ {\sf risk}\ {\sf of}\ {\sf securitised}\ {\sf loans}.$

Total liabilities and equity capital	147,024	127,084					127,078
	,•						,

The differences between the balance sheets of OP Financial Group and the consolidation group are due to differences in the content and extent of consolidation. Within the consolidation group, insurance companies have not been consolidated but are shown in investments made by the consolidation group and the insurance companies' equity capital is not included in the equity capital of the consolidation group. The consolidation group has applied the materiality threshold specified in Article 19 of CRR in the consolidation of its companies. Points 1.1 and 5.4 present items deducted from the capital base.

5.2 Main sources of differences between regulatory exposure amounts and carrying values in financial statements (EU LI2)

	a	b	С	d	е
			Items su	bject to	
		Credit risk		Securitisation	
31 Dec. 2019, € million	Total	framework	CCR framework	framework	Market risk
1 Assets carrying value amount under the scope of regulatory consolidation (as per template EU LI1)	129,708	120,161	4,562	624	4,361
2 Liabilities carrying value amount under the regulatory scope of consolidation (as per template EU LI1)					
4 Off-balance-sheet amounts	25,594	10,043			
6 Differences due to different netting rules, other than those already included in row 2	-1,666		-1,666		
7 Differences due to consideration of provisions	542	542			
9 Other adjustments	-166	-166			
10 Exposure amounts considered for regulatory purposes	154,012	130,580	2,896	624	4,361

In capital adequacy regulation, it is possible to take account of netting on a more extensive basis than in accounting. Given that certain accounting items cannot be unambiguously divided into risk types, these items have been removed from calculation to avoid their overlapping treatment. Of off-balance-sheet items, contractual exposure amount has been presented in column a and in column b exposure amount after applying the credit conversion factor.

According to the definition of the consolidation group, insurance companies have not been consolidated into capital adequacy but are treated as investments. Other non-consolidated entities are less than EUR 10 million in terms of their balance sheet. There are no investments that are deducted from own funds.

5.4 Capital base using formula by the European Banking Authority

According to the European Commission implementing regulation, a credit institution must present its own funds using the model for disclosure for own funds determined by the European Banking Authority.

31 Dec.	2019, EUR million		Regulation (EU) No 575/2013 Article Reference

Total exposure	131,504	125,510
Leverage ratio, %	8.3	8.6

The leverage ratio that describes a company's minimum leverage ratio is presented in accordance with Commission Delegated Regulation. According to these rules, the minimum ratio is three per cent. The minimum leverage ratio is based on end of quarter figures.

Table LRQua: Free format text boxes for disclosure on qualitative items Description of the processes used to manage the risk of excessive leverage

By means of ALM and capital management, the Group ensures that leverage will remain controlled in view of maturity transformation and that adequate tools will remain available for leverage management. OP Financial Group has set its capital adequacy target sufficiently high, in which case leverage will not be high or the minimum leverage ratio will not decrease close to the minimum level. The Group monitors leverage by means of its internal target levels for the leverage ratio and of capital adequacy; in addition, the Group monitors, for example, the net stable funding ratio (NSFR) and the asset encumbrance (AE).

2 Description of the factors that had an impact on the leverage Ratio during the period to which the disclosed leverage Ratio refers

Exposures increased less than the capital base. As a result, the leverage ratio rose. The amount of exposures decreased due to specifications of the treatment of off-balance-sheet items. The balance sheet grew in line with the growth targets set for the loan portfolio and the liquidity buffer. The Report by the Executive Board describes changes in the operating environment.

7.2 Disclosure on asset encumbrance

The tables below provide information on asset encumbrance and liabilities related to encumbered assets. The figures are presented as the quarterly median for 2019. An asset is considered encumbered if it has been pledged or given as collateral or they secure transactions recognised in the balance sheet (e.g. to secure debt). Other assets that are not freely available within the Group are also classified as encumbered. Encumbered assets mainly relate to collateral pertaining to OP Corporate Bank plc's derivatives, loans with collateral of central bank refinancing and collateral with respect to covered bonds issued by OP Mortgage Bank. Of the collateral related to covered bonds, EUR 2 809 million is overcollateralised. EUR 8 922 million of unencumbered assets is not eligible as collateral (e.g. intangible assets, and property, plant and equipment, adjusting entries for assets and tax assets).

9.2 Immaterial items not disclosed

Disclosure requirement

CRR Article 452 j)	A total of over 90% of OP Financial Group's IRBA exposures are in Finland. The average PD and LGD is not presented according to the split by geographic region.
	The exposure class Retail exposures - Mortgage-backed exposures is not presented with division
	SMEs / non-SMEs because the EAD share of exposures of SMEs with mortgage-backed exposures
Template EU CR6 based on the EBA's guidelines (EBA/GL/2016/11)	account for 2% of the mortgage-backed retail exposures.
	Retail exposures are not presented in the table concerned because they amount to less than EUR
Template EU CCR4 based on the EBA's guidelines (EBA/GL/2016/11)	200,000.
Template EU CRB-D based on the EBA's guidelines (EBA/GL/2016/11)	Material exposure classes are broken down in the table.
	The fixed debenture has not been specified; the amount included in own funds is less than EUR
CRR Article 437 1b) Main features of capital instruments	15,000
Information required on a half-yearly basis by Commission Implementing Regulation (EU) No 1423/2013	No material change
Blank templates and zero lines based on the EBA's guidelines (EBA/GL/2016/11) are not presented.

15	Optional call date, contingent call dates and redemption amount	Cooperative banks refund shareholders their cooperative contributions upon termination of membership. However, cooperative banks have the right to refuse to refund the contributions while the bank is operating. If a cooperative bank has not refused to refund the contribution, this may take place within 12 months after the end of the financial year when membership terminated. If the refund cannot be made in full in any given year, the balance will be refunded from disposable cooperative capital based on subsequent financial statements. However, this entitlement to the refund for the balance will terminate after the fifth financial statements.	Cooperative banks refund shareholders the subscription price of their Profit shares upon termination of membership. A Profit share's subscription price is also refunded to the shareholder when the shareholder has cancelled the Profit share. However, cooperative banks have the right to refuse to refund the Profit share contributions while the bank is operating. If a cooperative bank has not refused to refund the Profit share contribution, this may take place within 12 months after the end of the financial year when membership terminated or the Profit share has been cancelled. If the refund cannot be made in full in any given year, the balance will be refunded from disposable cooperative capital based on subsequent financial statements. However, this entitlement to the refund for the balance will terminate after the fifth financial statements.
